

Primary School Recycling Challenge

One of the most effective things students can do to improve their future, is to recycle the reusable goods that they no longer require and to challenge the school community to do the same.

Students when they no longer need something will often throw it in the bin and create more landfill, Would you prefer to give it to someone who needs it? There are many kids like you in developing countries who would love to have the things you no longer want. Please fill this bag with any of the items you can spare and Rotary will get it to the students who need it.
